Sub
I
--154. A therapeutic method for controlling thrombosis and
decreasing hemorrhaging risks in a patient which comprises
administering to the patient in a antithrombotic effective amount,
a composition which comprises a therapeutically acceptable carrier
and heparinic mucopolysaccharide fractions having constituents of
a molecular weight not in excess of about 10,000 daltons, which
fractions have (1) a mixture of lower molecular weight fractions
in the range of about 2,000 to about 4,000 daltons with higher
